

Desenvolvendo RESTful APIs com Ruby on Rails

Jackson Pires

Criando um Rack Middleware

Antes...

```
a, b, c = [1, 2, 3]
```

Middleware usados no Rails

```
rails middleware
```

Adicionando a pasta "lib"

```
config.autoload_paths << Rails.root.join('lib')
```

Rack middleware padrão

```
# lib/app_name.rb
```

```
class AppName
```

```
  def initialize(app)
```

```
    @app = app
```

```
  end
```

```
  def call(env)
```

```
    ['200', {'Content-Type' => 'text/html'}, ["Notebook API"]]
```

```
  end
```

```
end
```

Rack middleware padrão

```
Rails.application.config.middleware.use "AppName"
```

Rack middleware padrão

```
# lib/app_name.rb
class AppName
  def initialize(app)
    @app = app
  end

  def call(env)
    status, headers, response = @app.call(env)
    headers.merge!({'X-App-Name' => 'Notebook API'})
    [status, headers, [response.body]]
  end
end
```
